Environmental Policy Statement

Custom Transformers will comply with all relevant environmental legislation. The business and its operations will be conducted in a manner which minimises adverse environmental impact and promotes sustainable processes.

The volume of waste consigned to landfill will be minimised through reduction, reuse and recycling wherever possible.

Customers and suppliers will, wherever practical, be encouraged to use returnable and/or recyclable packaging. Packaging received from suppliers will where possible be used in the onward journey of finished products to our customers.

Efficient use of energy will be promoted by ensuring that electrical apparatus is switched off when not in use or not required. Efficiency will be a key factor when selecting new equipment.

Travel will be minimised by using electronic communication, replacing in person meetings wherever practical.

Delivery routes using Company vehicles will be planned to minimise mileage.

The risk of environmental pollution will be reduced by minimising the volume of chemicals stored and ensuring storage facilities are fit for purpose.

Employees are encouraged to consider their environment responsibility during and outside of working hours, adopting the Company ethos of minimising energy consumption and waste through reduction, reuse and recycling.
