REACH Statement

The European Registration, Evaluation, Authorization, and restriction of Chemicals (REACH) 1907/2006, Annex XIV & Annex XVII entered into force in June 2007, and affects all companies producing, importing, using, or placing products on the European market. The aim of the REACH regulation is to ensure a high level of protection of human health and the environment from chemical substances.

The materials used by Custom Transformers to manufacture its products are standard catalogued parts, widely available throughout the industry. All components produced are classified as "articles" within the regulation, and we are classified as a "downstream user" of chemicals, and neither produce, import, or formulate.

All chemicals will have been pre-registered by entities further up the supply chain, and to the best of our knowledge, unless specified by the customer, there are no SVHC's within products supplied to or by Custom Transformers.

Please be aware that this declaration is entirely based on contracts held with our suppliers: While every purchase order placed with our suppliers states "All material supplied to Custom Transformers must be RoHS and REACH compliant and free from Substances of Very High Concern as currently defined by the European Chemicals Agency", we have no way of confirming if any substance included in the Registry of Intentions is present, and no way of confirming the absence of those substances currently listed.
